Growing Distribution Sales with Order Management

xWD has extended Sales Order Entry functionality designed specifically for the Distribution market.

Sales Order Functionality:

Favorites: This feature allows you to create sales orders rapidly using your customers history to build orders.

Smooth Margin: This feature gives you ability to change margins on one or multiple items on the fly without opening every item on your order.

Growing Distribution Sales with Order Management

Move options: Move up and Move down allow you to change the sequence of your sales order so you can send them back to your customer in any order you wish.

Issue Available: Designed with Counter Sales in mind, you now have the ability to issue all available inventory for your order right from the sales order screen.

Ship Order: This also was designed with Counter Sales in Mind, gives you the ability to ship the order from the SOE screen. Existing functionality tied to this will allow you to create the invoice and complete a Sales Order and never leave the SOE screen.

Growing Distribution Sales with Order Management

Advanced Item Search.

This functionality can be found in Sales Order item Screen. It combines Alias search with the normal search as well as giving you inventory levels before adding an item to your order. When an item is selected here the cursor is placed in the QTY field when you return to Sales Order Item.

Vendor Catalog: Houses non stock items and Pricing Service items to extend the amount of items you can offer, if you can get item data it can exist and be ready to add to your Sales Order.
